## **DETAILED ACTION**

### ***Remarks***

1. The After Final Amendment dated April 5, 2004 has been entered as discussed by the Examiner at the Interview on December 19, 2003.
2. The prior art does teach providing an additional torque ("retorque") in a tightening direction to test the amount torque previously applied to a fastener. See e.g., U.S. Pats. 4,768,388; 4,450,727; and 4,319,494. Furthermore, it is also known in the art to audit the load in a thread joint connection by providing additional torque in a releasing direction. See e.g., U.S. 6,212,763 (Figure 14). However, the prior art does not disclose a first and second audit angles (M-alpha values) for previously tightened fasteners.
3. As previously pointed out, while U.S. Pat. 4,106,176 to Rice et al, discloses calculating a variable similar to Applicant's M-alpha value for tightening a fastener. However, there is no teaching or suggestion to use such the method for auditing the torque in a previously tightened fastener.
